## BEYOND F.A.I.R. DATA

### COLLABORATIVE KNOWLEDGE MANAGEMENT

#### FAST-TRACK DRUG DISCOVERY & REDUCE RESEARCH COSTS

Company-wide access to research data and knowledge as well as a data-driven application building platform accelerate time-to-market for new drugs and therapies.

#### SPEED UP DRUG SAFETY REVIEWS & OPTIMIZE RISK CONTROL

Existing research findings can be leveraged as supporting metadata in review processes mandated by regulatory agencies, thus speeding up the approval processes.

#### REUSE EXISTING DATA & KNOWLEDGE

Reusability of data and knowledge and the automation of data collection and integration help eliminate error-prone manual processes and allow users to focus on value-adding tasks.

#### GENERATE CONTINUOUS KNOWLEDGE

Data is transformed into company-wide available knowledge and can drive forecasts and prediction, and support research initiatives and business decisions.

#### STREAMLINE PROCESSES FROM R&D TO CLINICAL TRIALS TO MANUFACTURING

Research and lab data become available to manufacturing plants, helping streamline knowledge transfer and the planning of clinical trials, manufacturing and distribution processes.

#### ALIGN STRATEGIC EFFORTS & CAPITALIZE ON PROMISING OPPORTUNITIES

Surfacing existing knowledge and making data accessible and reusable across the entire organization helps you focus on promising opportunities and increase project success rate.
